

Caverion signed a technical maintenance agreement with MTU Aero Engines AG in Germany

Caverion Corporation Investor News 16 July 2014 at 11 a.m.

Caverion signed a technical maintenance agreement with MTU Aero Engines AG in Germany

Caverion has signed a contract on technical maintenance and managed operations with Germany's leading engine manufacturer for civil and military aviation MTU Aero Engines AG. The agreement covers all technical systems of MTU's headquarters in Munich including heating and sanitation, air conditioning, refrigeration and ventilation, building automation and electricity. The agreement will come into force in July 2014. The value of the deal is not disclosed.

The property covers approximately 285,000 square metres and provides workspace to 5,000 MTU employees located in the administration, production, research and development departments.

Caverion will also identify energy-saving opportunities at the property. After a performance audit, Caverion will implement energy-saving measures in the buildings and production plants. Considerable savings can be achieved by conducting regular energy inspections of air conditioners, amongst other things.

This agreement furthers the existing cooperation between Caverion and the industrial client MTU as Caverion already maintains MTU's office in Erding.
